## Committees

### Scientific Committee

- Aleksandar Krmpot, Serbia
- Aleksandra Maluckov, Serbia
- Bojan Resan, Switzerland
- Boris Malomed, Israel
- Branislav Jelenković, Serbia
- Carsten Ronning, Germany
- Concita Sibilina, Italy
- Darko Zibar, Denmark
- Dmitry Budker, Germany
- Dragan Inđin, United Kingdom
- Edik Rafailov, United Kingdom
- Francesco Cataliotti, Italy
- Giannis Zacharakis, Greece
- Goran Isić, Serbia
- Goran Mašanović, United Kingdom
- Ivana Vasić, Serbia
- Jasna Crnjanski, Serbia
- Jelena Radovanović, Serbia
- Jelena Stašić, Serbia
- Jerker Widengren, Sweden
- Jovan Bajić, Serbia
- Ljupčo Hadžievski, Serbia
- Luca Antonelli, UK
- Marco Canepari, France
- Marko Krstić, Serbia
- Marko Spasenović, Serbia
- Milan Kovačević, Serbia
- Milena Milošević, Serbia
- Milivoj Belić, Qatar
- Mirjana Novaković, Serbia
- Nikola Stojanović, Germany
- Nikola Vuković, Serbia
- Nikos Pleros, Greece
- Pavle Andjus, Serbia
- Petra Beličev, Serbia
- Sergei Turitsyn, UK
- Vladan Pavlović, Serbia
- Vladan Vuletić, USA
- Vladana Vukojević, Sweden
- Zoran Grujić, Serbia

### Organizing Committee

- Marina Lekić, Institute of Physics Belgrade (Chair)
- Aleksandar Krmpot, Institute of Physics Belgrade (Co-Chair)
- Danica Pavlović, Institute of Physics Belgrade (Secretary)
- Stanko Nikolić, Institute of Physics Belgrade (Webmaster)
- Mihailo Rabasović, Institute of Physics Belgrade
- Tanja Pajić, Faculty of Biology, University of Belgrade
- Aleksandra Gočanin, Faculty of Physics, University of Belgrade
- Jadranka Vasiljević, Institute of Physics Belgrade
- Uroš Ralević, Institute of Physics Belgrade

### Technical Organizer

A wide range of new biomaterials for medical use has been prepared using various coupled ionic substitutions in a fluorapatite (FAP) crystal matrix [1-4]. FAP is present in human enamel, so its synthetic form is often used in the treatment of dental caries or osteoporosis [5]. In recent years, FAP nano-sized particles doped with rare-earth ions have been extensively studied as potential luminescent material for cell labeling, bone imaging in bone tissue engineering, and for cancer therapies [1-4]. Moreover, FAP is a suitable crystal matrix for various substituents that can alter its physicochemical, luminescent, and biological properties [5].

Uniform nanopowders of pure fluorapatite (FAP) and praseodymium-nitrate-carbonate substituted fluorapatite (PrNCFAP) have been successfully synthesized by precipitation reaction, and systematically characterized by XRD, FTIR, SEM, TG and PL methods. Coupled substitution of FAP reduces the crystallite size, and FTIR spectra indicate the presence of nitrate ( $\text{NO}_3^{2-}$ ) and carbonate ( $\text{CO}_3^{2-}$ ) species. Structure thermally analysis confirm decomposition of water,  $\text{NO}_3^{2-}$  and  $\text{CO}_3^{2-}$  species in the range of 100-750 °C. Emission of FAP nanopowder occurred in the violet-blue region of visible part of the spectrum, with redshift to the green color region when  $\text{Pr}^{3+}$ ,  $\text{NO}_3^{2-}$  and  $\text{CO}_3^{2-}$  substituted in the lattice. Analysis of luminescence spectra by MCR-ALS method extract three fluorophores from the samples and showed simultaneous existents of emission-reabsorption between dopants in FAP lattice.

The obtained samples showed a small degree of hemolysis and antibacterial activity and could potentially be candidates for further research in dentistry.

### ACKNOWLEDGMENT

The authors are grateful to the Ministry of Education, Science and Technological Development of the Republic of Serbia (Contract number: 451-03-9/2021-14/200023)
